Version History

Doc Version	Date	Comment
1.0	March 12, 2025	Segrite Threat Intel 1.0
1.1	March 25, 2025	Included section on Vulnerabilities and Adversaries
		along with other editorial and formatting edits.
1.2	April 25, 2025	Included section on Intel Submissions and support
		for STIX 2.0 file download format for Indicators,
		Adversaries and Vulnerability Intelligence along with
		other editorial and formatting updates.
1.3	May 20, 2025	Included section on Reports (RSS Feeds and Blogs)
		and Adversaries on Intrusion Sets (APT,
		Ransomware and Campaigns) and minor
		enhancements for improving usability.
1.4	October 10, 2025	 Seqrite Threat Intel is now accessible from Seqrite's Centralized Security Management Platform (CSM). STI Integration with SMAP

Introduction

Seqrite Threat Intel is a real-time threat intelligence solution that aggregates intel from various sources including QuickHeal's rich Telemetry. This Intel is further processed and disseminated over Seqrite Threat Intel Portal. It provides actionable insights tailored to industries like BFSI while ensuring compliance with regulatory requirements.

Seqrite Threat Intel 1.4 provides automated streams of useful threat information that enterprises can ingest into their security tools to block threats or derive helpful insights. This information includes traditional indicators of compromise (IoCs) such as malicious Domains, URLs, IP addresses, Malware hashes, Adversaries, Vulnerability Intelligence, Cyber Threats in the form of RSS Blogs, Intel sharing between all Tenant etc. Information related to all the threats are put together in STIX format and delivered to customers via the TAXII server.

Seqrite Threat Intel is powered by the Seqrite lab process and detects millions of threats every day. Information related to threats is messaged and put together in STIX format and delivered to customers via the TAXII server. The following page details how you can obtain Cyber Threat Intelligence (CTI) using the Trusted Automated Exchange of Intelligence Information (TAXII) services.

What is STIX?

- Structured Threat Information expression or STIX is a language format used to exchange CTI (Cyber Threat Intelligence). The STIX format is used to show information related to indicator objects, malware objects and relationship objects.
 Relationship objects link a common association between indicator and malware objects.
- The STIX feed is in a standardized JSON format and conveys CTI data that can be easily understood. It represents the common language where both entities client and server, can use STIX for a common method of communication.

What is TAXII?

- Trusted Automated Exchange of Intelligence Information or TAXII, is a transport protocol used to exchange CTI data over Hyper Text Transfer Protocol Secure (HTTPS).
- TAXII enables companies like Seqrite to share CTI with other users by defining an API that aligns with common sharing models.
- TAXII is specifically designed to support the exchange of CTI represented in STIX format.
- TAXII integration with security controls such as SIEM, SOAR, TIP, enables
 organizations to automate the sharing and consumption of threat intelligence,
 thereby enhancing their ability to detect, analyze, and respond to cyber threats.

The TAXII and STIX Relationship

- The open-source projects of TAXII and STIX standards were developed by the OASIS
 CTI Technical Committee for the prevention and mitigation of cyber-attacks. STIX
 indicates the cyber threat intelligence data and TAXII is the vehicle for the exchange
 of that information.
- TAXII is the mechanism for the transport of CTI represented in STIX format. You can
 use TAXII services to share cyber threat information in a secure and automated
 manner.

Relationship between Feeds and Collections

- As mentioned, STIX provides CTI data Feeds in JSON format. Feeds contain CTI data from various collections.
- A TAXII Collection is an interface to a database of CTI objects provided by a TAXII Server. It is used by TAXII Clients to request information from the TAXII Server.
- It is common to use the term Feeds when referring to STIX CTI threat data with the
 understanding that what comprises a CTI Feed is information from a Collection of CTI
 objects.

Cloud Deployment

The Sequite Threat Intel now also operates as part of a cloud-based deployment through its integration with the **CSM (Centralized Security Management)**.

Accessing the Segrite Threat Intel

If you are an existing user follow the sign-in process using your credentials; if you are a new subscriber, complete the following three steps to get started.

- A. Register with Segrite Threat Intel/ Sign-Up with Segrite Threat Intel
- B. Set Password
- C. Signing In

A. Register with Seqrite Threat Intel /Sign-Up with Seqrite Threat Intel

To access Segrite Threat Intel, you must first register using a product key.

Note: You will receive the product key after signing the agreement and completing the milestone payment.

To register with Segrite Threat Intel, follow these steps:

- 1. Enter the URL https://pre-csm.qhtpl.com/csm/signup/sti in the browser. The Sign-Up page is displayed.
- 2. Click **Register Here**.
 - Register for Centralized Security Management page is displayed.
- 3. Select the **Threat Intel Product Key** checkbox, enter the product key, and click **Next**.
- 4. Enter the **Administrator Details** like First Name, Last Name, Business Email Address, Mobile No., Job Role, and click **Next**.
- 5. Enter the **Company Details** like, Company Name, Industry, Company Size, Country, State, City, Preferred Product Language, and click **Next**.
- 6. If the email address is incorrect, click **Click here to edit** to update the email address and click **Confirm**.

B. Set Password

Once you register successfully, you will receive an email with the activation link to set password. To set a password, follow these steps:

- 1. Click the activation link given in the email.
- Enter password and click Set Password.The Sign in page is displayed.

C. Signing In

To access Segrite Threat Intel, follow these steps:

- Enter the email ID, password and click Sign in.
 The Two- factor Authentication page is displayed.
- 2. Enter the OTP you have received on your registered email address or registered phone number and click **Verify**.
 - The **Segrite Centralized Security Management License Agreement** page is displayed.
- 3. Agree with the terms of **SEQRITE END-USER LICENSE AGREEMENT** and click **Yes, I Agree.** The **Seqrite Centralized Security Management** dashboard is displayed.
- 4. Click **STI** on the left pane. The dashboard of Seqrite Threat Intel is displayed.

Forgot Password

Follow these steps to reset your password:

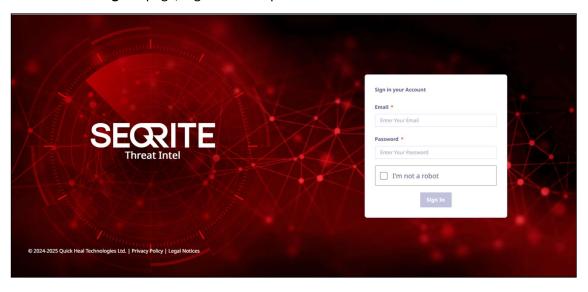

- 1. Click Forgot Password? link on the Sign in page.
- 2. Enter your registered email ID, select **I'm not a robot** checkbox, and click **Recover**. An email will be sent to your registered email ID with a link to reset a password.
- 3. Click the link provided in the email. Set Password page is displayed.
- 4. Enter new password, confirm password and click **Set Password**.
- 5. Go to **Sign in** page and login with the new password.

On-Premises Deployment

Seqrite Threat Intel is a web-based application hosted in Customer premises.

To access this portal, follow these steps:

- 1. Go to https://stip.seqrite.com/.
- 2. On the **Sign In** page, login with the provided credentials.

3. Once authenticated, the user will land on the Dashboard.

Setting Up Organization and Analysts

An administrator sets up the organization's structure, assigns user roles, and can disable the account.

1. Setting up organization

- Segrite admin will create organizations within the portal.
- Admins assign an Organization Admin for each created organization.

2. Adding Users

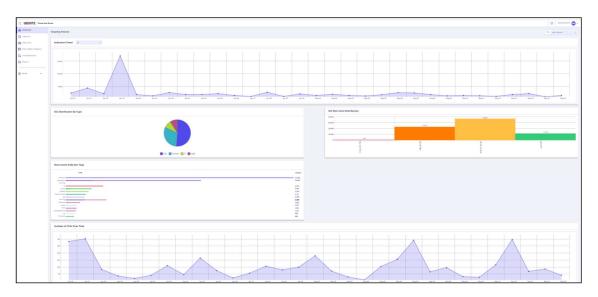

- Organization Admins can add Analysts and assign roles such as:
 - Org Admin: Full access to manage the organization.
 - Org Analyst: Can view and analyse threat Intel data.

3. Disabling Accounts

- Segrite admins can disable organizations or specific analysts.
- Seqrite Admin or Organization Admin can disable specific users of their organization.

Dashboard

The dashboard is the default page that is displayed after you log on to the Seqrite Threat Intel portal. The dashboard helps to navigate easily to all the features or components of the Seqrite Threat Intel portal.

Dashboard Metrics

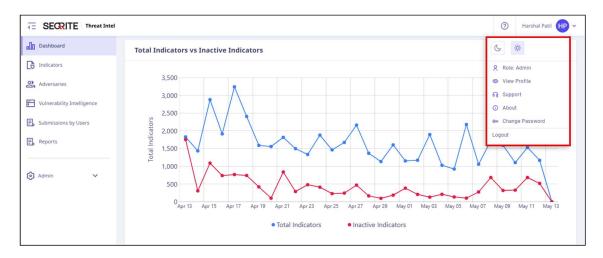

The dashboard gives a glimpse of predefined metrics related to Indicators of Compromise (IoC). Some (not limited to) pre-defined metrics are as follows.

Section	Description
Indicators Trend	It gives a visual representation of IoC trends over time.
IoC Distribution by Type	It shows the breakdown of IoC by categories such as IPs,
	domains, or files.
IoC Risk Score Distribution	It gives visual representation of risk levels (low, medium, high)
	for detected IoC.
Most Active indicator Tags	Gives the type and count of the most active malware categories.
Top Products affected by	List of Products / applications which are most exploited by their
CVEs	vulnerabilities.
Number of CVEs over time	Timeline view of all the reported Vulnerabilities.
CVE Distribution by Severity	Distribution of all reported vulnerabilities based on their CVSS
	score as Critical, High, Medium and Low.
Total Indicators vs Inactive	Timeline view of all reported active Indicators vs Inactive
Indicators	Indicators.
Top 10 Organizations	Top 10 Organizations which are targeted by Adversaries.
targeted by Adversaries	

Section	Description
Top 10 Sectors targeted by	Top 10 Sectors which are targeted by Adversaries.
Adversaries	
Top 10 Adversary	Top 10 techniques used by Adversaries to carry out a Cyber-
Techniques	attack.

User Profile

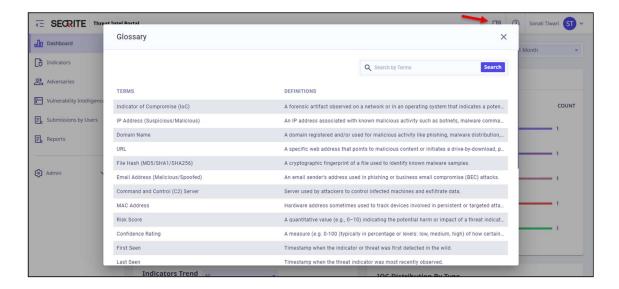

The User Profile section on the upper-right corner of the dashboard shows the name of the registered user.

When you click the logged-in username, the options are displayed: Role, View Profile, Support, About, Change Password, and Logout.

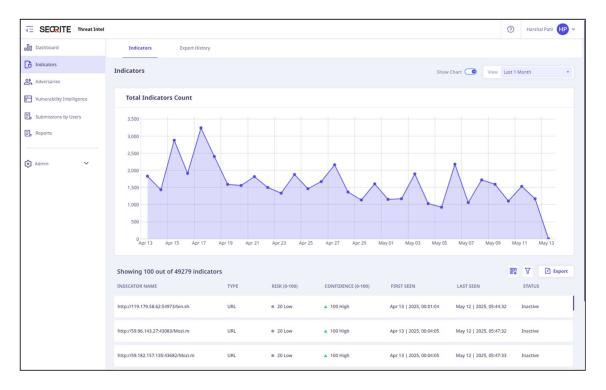

Glossary

Glossary provides clear definition of key terms and phrases used throughout the Seqrite Threat Intel. It helps users to understand words and concepts related to cyber threats, attacks, and security.

Indicators

The **Indicators** tab provides a detailed overview of all newly detected IoCs. IoC includes IP addresses, domain names, file hashes, and URLs that can be used to detect malicious activity. These indicators help to detect, analyse and respond to cyber threats effectively.

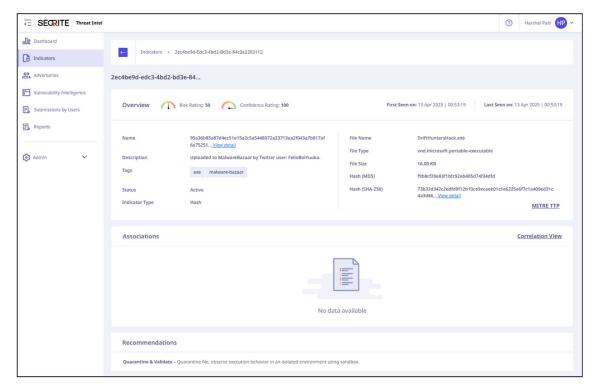

The **Indicators** tab provides the graphical and tabular presentation of IoC. You can view the IoC details and filter the IoC chart by specific date range that is last 1 day, last 7 days, last 1 month, last 3 months, last 1 year, and can select a custom date range as well.

Viewing the IoC Details

You can view the IoC details such as description or IoC name, type of IoC, ratings, and first and last seen in the tabular format.

To view the details of each IoC:

- 1. On the Segrite Threat Intel portal, click **Indicators** in the left pane.
- 2. On the **Indicators** page, select the indicator and click the > icon. The indicator details page displays the following details:

- Indicator Overview: Risk score, confidence score, and the description of the IoC.
- Attributes: Key properties such as source, detection date, and type.
- TTP Mappings: Links to tactics, techniques, and procedures associated with the
- Associations: Known relations with Threats Actors, Malware or IoCs.
- Recommendations: Recommended action for selected IoC.

Selecting Column from the Column Selector

The Column Selector allows you to customize the table view. You can choose the desired column to display on a table.

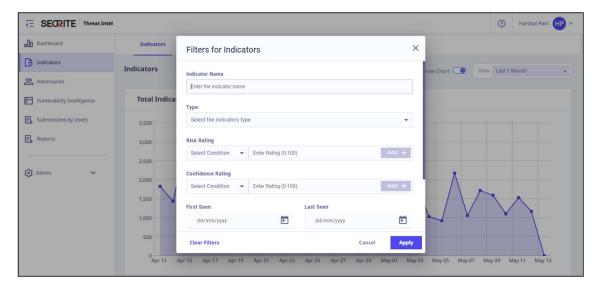

• To choose columns, click on the Indicators page, and select the desired column.

Note: You can choose up to 7 columns to display.

Filtering the IoC List

You can filter the IoC list to refine results based on attributes or categories. To filter the IoC list, follow these steps:

- 1. On the Segrite Threat Intel portal, click **Indicators** in the left pane.
- 2. On the **Indicators** page, click ✓.

3. Enter the attribute that is indicator name, type, ratings, first seen date, or the last seen date, and click **Apply**.

The system displays filtered data.

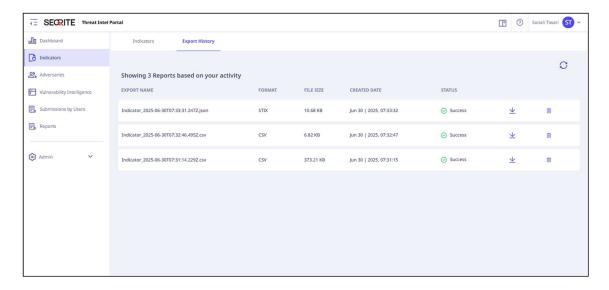

Exporting IoC as a CSV/STIX

You can download all IoCs currently visible on the page in the CSV or STIX format. To export/download the IoCs:

- 1. On the Segrite Threat Intel portal, click **Indicators** in the left pane.
- 2. On the **Indicators** page click **Export**, select the format that is CSV or STIX 2.1, and then click **Export**.

Viewing IoC Export History

Export History shows a record of all the Indicators of Compromise (IoCs) that have been exported by the user.

Export History provides a record that is export name, format (STIX or CSV), file size, created date, and status.

• To view the export history, click **Export History** on the **Indicators** page.

The list of exported IoCs is displayed.

Adversaries

An Adversary is any individual or a group that attempts harmful activities like cyber-attack or spying to threaten cyber resources.

The **Adversaries** tab gives information about the detected adversaries. Adversary details include adversary names, type, target country, target industry, first seen and last seen. These adversary details help to detect, analyse and respond to cyber threats effectively.

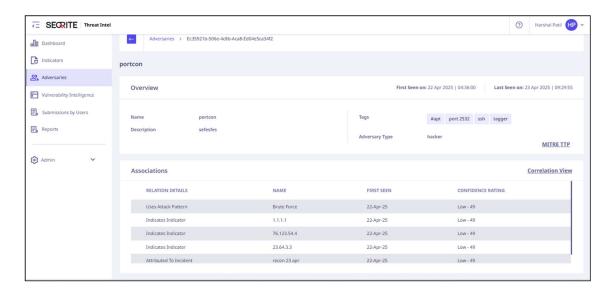

This intel offers a comprehensive view of threat actors, including their tactics, techniques, and associations. It helps in understanding attacker motives, targeted regions and targeted sectors. Organizations can use this intelligence to anticipate attacks and enhance threat-hunting capabilities.

Viewing the Adversary Details

You can view the adversary details such as adversary name, type, target country, target industry, first and last seen in the tabular format. To view the details of each adversary, follow these steps:

- 1. On the Segrite Threat Intel portal, click **Adversaries** in the left pane.
- On the Adversaries page, select the adversary and click the > icon.
 The adversary details page displays the following details:

- Adversary Overview: Adversary Name, Target Country, Target City, Target Sector, Attack Origination, Goals, Motivations, First Seen and Last Seen.
- **TTP Mappings**: Links to tactics, techniques, and procedures associated with the adversary.
- Associations: Known relations with Threats Actors, Malware or IoCs.

Selecting Column from the Column Selector

The Column Selector allows you to customize the table view. You can choose the desired column to display on a table.

To choose columns, click on the Adversaries page and select the desired column.

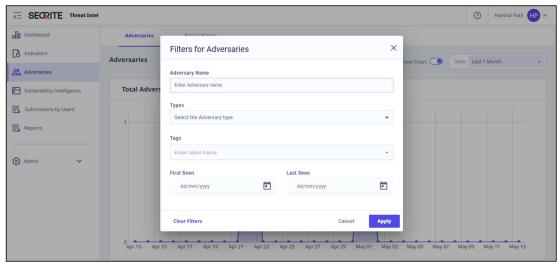

Note: You can choose up to 7 columns to display.

Filtering the Adversary List

You can filter the adversary list to refine results based on types.

To filter the adversary list, follow these steps:

- 1. On the Segrite Threat Intel portal, click **Adversaries** in the left pane.
- 2. On the **Adversaries** page click **7**.
- 3. Enter the attribute that is adversary name, type, first seen date, or the last seen date, and click **Apply**.

The system displays filtered data.

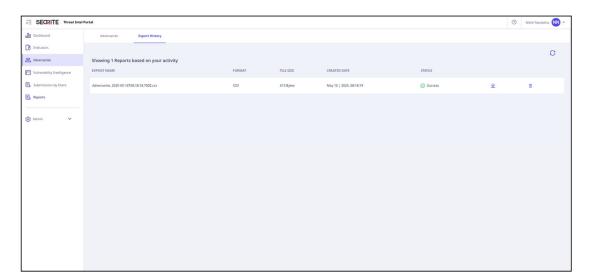

Exporting Adversaries as a CSV/STIX

You can download all adversaries currently visible on the page in the CSV or STIX format. To export/download the adversaries, follow these steps:

- 1. On the Segrite Threat Intel portal, click **Adversaries** in the left pane.
- 2. On the **Adversaries** page click **Export**, select the format that is CSV or STIX 2.1, and then click **Export**.

Viewing Adversary Export History

Export History shows a record of all the adversaries that have been exported by the user.

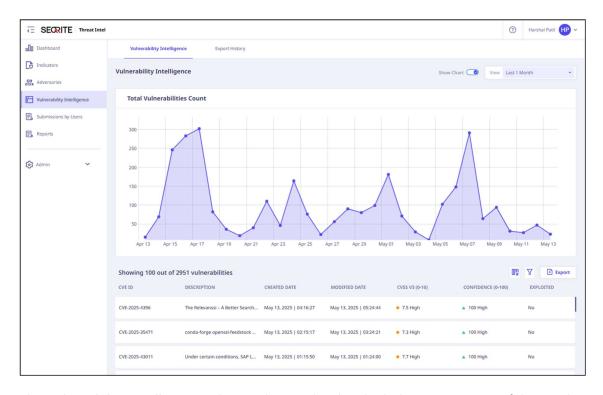

Export History provides a record that is export name, format (STIX or CSV), file size, created date, and status.

To view the export history, click Export History on the Adversaries page.
 The list of exported adversaries is displayed.

Vulnerability Intelligence

Vulnerability intelligence provides insights into newly discovered vulnerabilities, including severity, exploitability, and affected systems. It includes patch details, associations with known threats. This helps organizations proactively mitigate security gaps and strengthen their defenses.

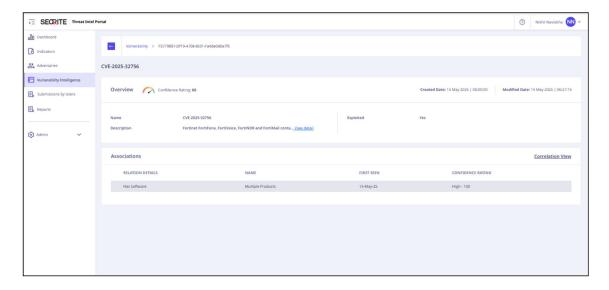

The **Vulnerability Intelligence** tab provides graphical and tabular presentation of detected vulnerabilities. You can view the vulnerability details and filter the vulnerability chart by specific date range that is last 1 day, last 7 days, last 1 month, last 3 months, and last 1 year.

Viewing the Vulnerability Details

You can view the vulnerability details such as CVE ID, description, created date, modified date, CVSS V3 Score, confidence and exploited in the tabular format. To view the details of each vulnerability, follow these steps:

- 1. On the Segrite Threat Intel portal, click **Vulnerability Intelligence** in the left pane.
- On the Vulnerability Intelligence page, select the vulnerability and click the > icon.
 The vulnerability details page displays the following details:

- **Overview**: CVE Name/ID, Description, Tags, CVSS Score, affected products, risk score, External References, Confidentiality, Integrity, Availability (CIA) Impact.
- **Associations**: Known relations with Malware, IoCs or Threat Actors as well as techniques and procedures associated with exploiting the vulnerability.

Selecting Column from the Column Selector

The Column Selector allows you to customize the table view. You can choose the desired column to display on a table.

 To choose columns, click on the Vulnerability Intelligence page, and choose the desired column.

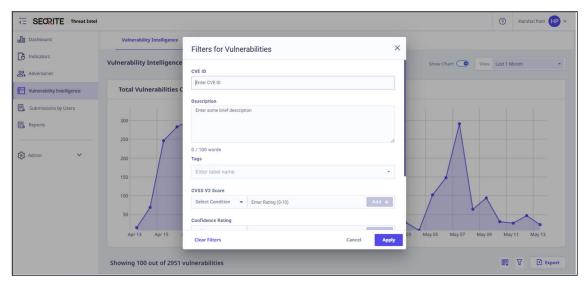

Note: You can choose up to 7 columns to display.

Filtering the Vulnerability List

You can filter the vulnerability list to refine results based on CVSS V3 score or confidence ratings.

To filter the vulnerability list, follow these steps:

- 1. On the Segrite Threat Intel portal, click **Vulnerability Intelligence** in the left pane.
- 2. On the **Vulnerability Intelligence** page click **▽**.
- 3. Enter the details that are, CVE ID, description, CVSS V3 score, confidence rating, created date, modified date, exploited, and then click **Apply**.

The system displays filtered data.

Exporting Vulnerabilities as a CSV/STIX

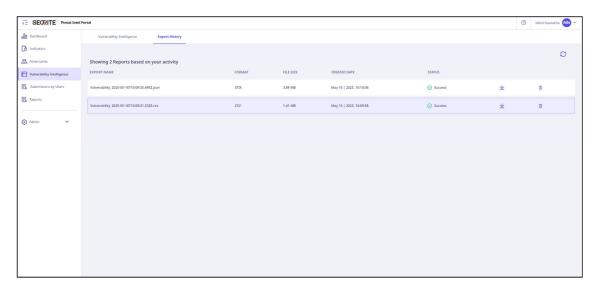

You can download all the vulnerabilities currently visible on the page in the CSV or STIX format.

To export/download vulnerabilities, follow these steps:

- 1. On the Segrite Threat Intel portal, click **Vulnerability Intelligence** in the left pane.
- 2. On the **Vulnerability Intelligence** page click **Export**, select the format that is CSV or STIX 2.1, and then click **Export**.

Viewing Vulnerability Intelligence Export History

Export History shows a record of all the vulnerabilities that have been exported by the user.

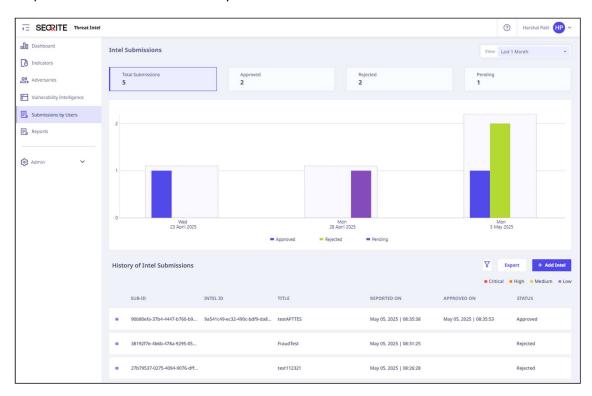

Export History provides a record that is export name, format (STIX or CSV), file size, created date, and status.

• To view the export history, click **Export History** on the **Vulnerability Intelligence** page.

The list of exported vulnerabilities is displayed.

Submissions by Users

Intel Submissions is the process of adding or sharing new threat intelligence data such as, IoCs, tactics, techniques, procedures, threat actors, malware signatures, or vulnerability details for analysis, correlation, and distribution. This helps to detect, investigate, and respond to threats more effectively.

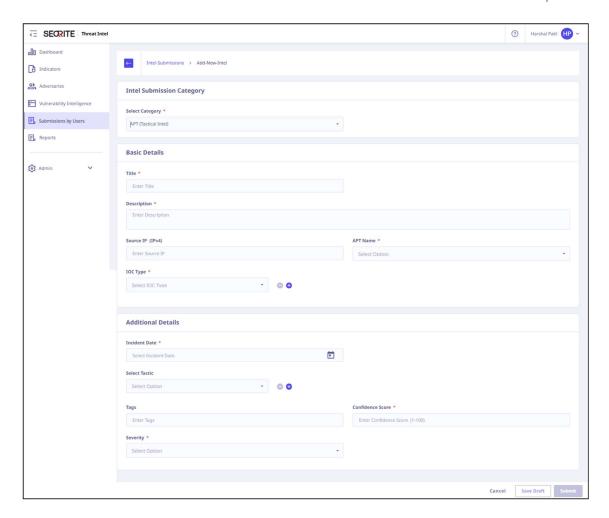

The **Submissions by Users** tab help you to view and analyze all the incoming intel. You can view the submitted intel details, their severity (critical, high, medium, low) and filter the intel by specific date range that is last 1 day, last 7 days, last 1 month, last 3 months, and last 1 year.

Adding New Intel

To add new intel, Organization admins have to follow these steps:

- 1. On the Segrite Threat Intel portal, click **Submissions by Users** in the left pane.
- On the Submissions by Users page, click + Add Intel.The Add New Intel page is displayed.
- 3. Select the Category from the list, enter Basic Details and Additional Details.
- 4. If you want to review the intel before submission, click Save Draft else click Submit.

This provision is available to Organization Admins.

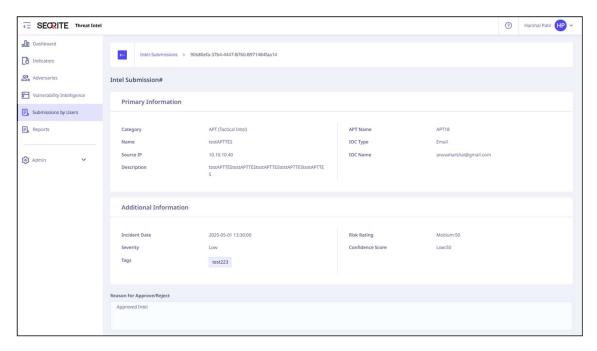

Note: The Seqrite Admin will approve the submitted intel.

Viewing the Submitted Intel

You can view the intel submissions details such as severity (Critical, High, Medium, Low) highlighted with the color codes, Sub ID (Submission ID), Intel ID, title, reported on, approved on, and the status in the tabular format.

To view the details of each intel, follow these steps:

- 1. On the Seqrite Threat Intel portal, click **Submissions by Users** in the left pane.
- 2. On the **Submissions by Users** page, select the intel and click the > icon. The intel submission details page displays the following details:

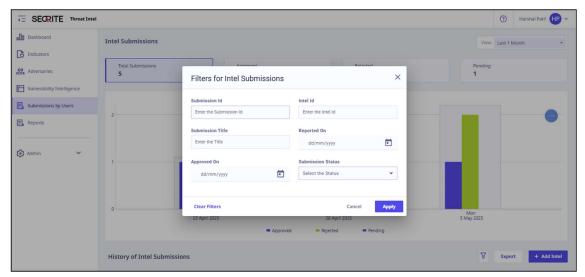

- Primary Information: For example, APT Category (Category, Name, Source IP, Description, APT Name, IoC Type, IoC Name)
- Additional Information: Incident Date, Severity, Tags, Risk ratings, and Confidence Core.
- Reason for Approve/Reject: Shows reason for intel approval or rejection.

Filtering the Submitted Intel

You can filter the intel submissions list to refine results based on submission ID, intel ID, submission title, reported on, approved on, and submission status.

To filter the intel submissions list, follow these steps:

- 1. On the Segrite Threat Intel portal, click **Submissions by Users** in the left pane.
- 2. On the **Submissions by Users** page click \mathbf{Y} .
- 3. Enter the details that are, submission ID, intel ID, submission title, reported on, approved on, and submission status and then click **Apply**.

The system displays filtered data.

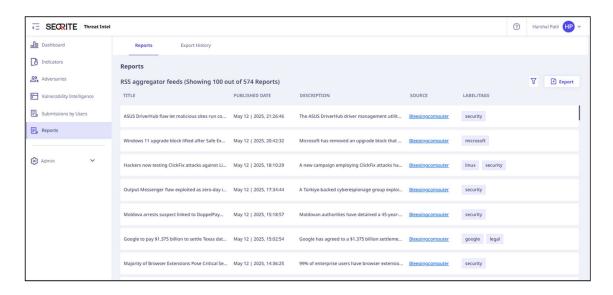

Exporting Intel Submissions as a CSV

You can download all the intel submissions currently visible on the page in the CSV format. To export/download intel submissions, follow these steps:

- 1. On the Segrite Threat Intel porta, click **Submissions by Users** in the left pane.
- 2. On the Submissions by Users page click Export CSV.

Reports

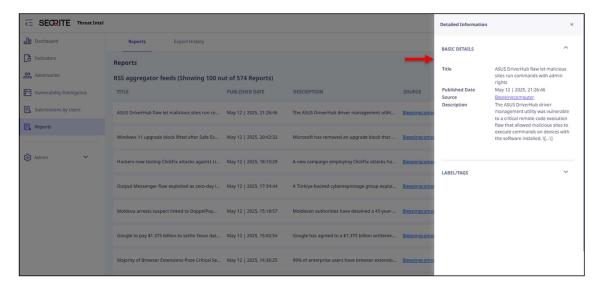

Sequite Threat Intel continuously aggregates the latest cyber threat information from trusted RSS feeds and security blogs, enabling threat analysts to stay updated on global developments and derive actionable insights.

Viewing Reports

You can view a report detail such as title, published date, source, source, description, and label/tags assigned to the report. To view the reports, follow these steps:

- 1. On the Segrite Threat Intel portal, click **Reports** in the left pane.
- 2. On the **Reports** page, select the report and click the > icon. The **Detailed Information** page displays the following details:

Basic Details: Report title, description, published date, source, and description.

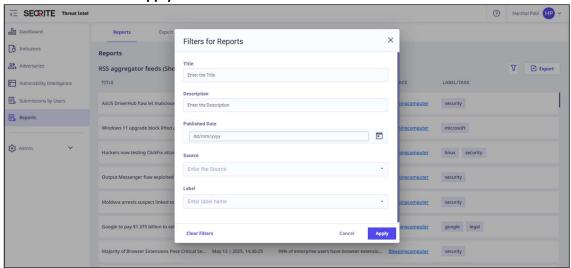

• Label/Tag: Shows the tags or labels assigned to the report.

Filtering the Reports List

You can filter the reports list to refine results based on title, description, published date, source, and label.

To filter the reports list, follow these steps:

- 1. On the Segrite Threat Intel portal, click **Reports** in the left pane.
- 2. On the **Reports** page click **▼**.
- 3. Enter the details that are, title, description, published date, source, label and then click **Apply**.

The system displays filtered data.

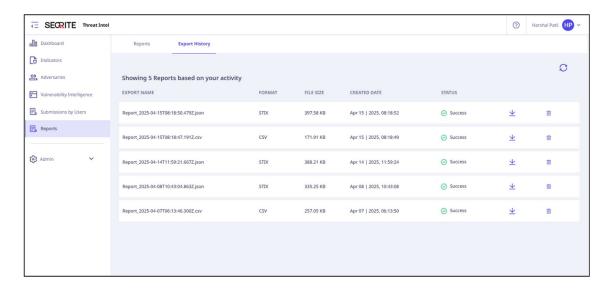

Exporting Reports as a CSV/STIX

You can download all the reports currently visible on the page in the CSV or STIX format. To export/download reports, follow these steps:

- 1. On the Segrite Threat Intel portal, click **Reports** in the left pane.
- 2. On the **Reports** page click **Export**, select the format that is CSV or STIX 2.1, and then click **Export**.

Viewing Export History

Export History shows a record of when and what reports are exported by the user. This information tracks the usage of reports and can be useful in auditing and accountability purposes.

Export History provides a record that is report name, file size, created date, the format in which the reports were exported (STIX, CSV), and status.

To view the export history, follow these steps:

- 1. On the Seqrite Threat Intel portal, click **Reports** in the left pane.
- 2. On the Reports page click Export History.

The list of exported reports is displayed.

Admin

Within Segrite Threat Intel, following user roles are present:

- 1. Org Admin: Org admin can view the organization details. Org admin has the authority to add and edit users, assign user roles, and disable users.
- 2. Org Analyst: Org analyst can access only Dashboard and Indicators tabs.

Users

Adding New User

For **Cloud Users**, Org Admin can add users through the Seqrite CSM console only. To add a user, follow these steps:

- 1. On the Seqrite CSM page, click **Admin Users** on the left pane.
- Click + Add User.The Add User page is displayed.
- 3. Enter the user details and click Add.

For **On Premise Users**, Org Admin can add users in the Admin section.

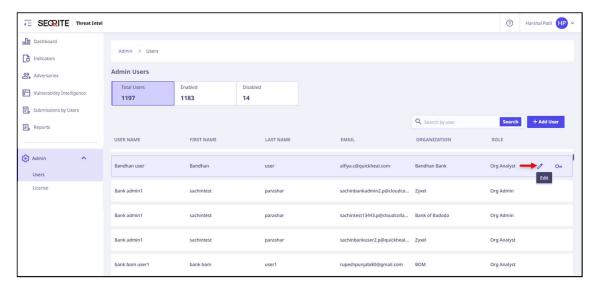

To add a user, Follow these steps:

- 1. On the Segrite Threat Intel portal, click **Admin** and select **Users** in the left pane.
- Click + Add User.The Add User page is displayed.
- 3. Enter the user details and click Add.

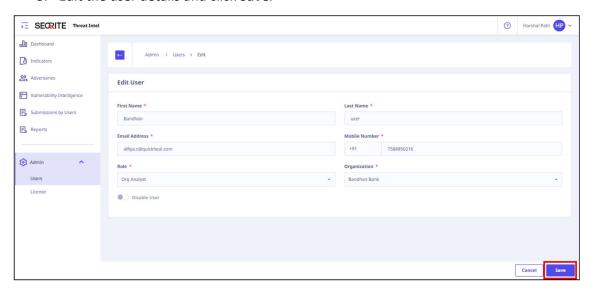

Editing a User

For **On Premise Users**, Org Admin can edit the existing user from the admin section. To edit the existing user, follow these steps:

- 1. On the Segrite Threat Intel portal, click **Admin** and select **Users** in the left pane.
- 2. On the Admin Users page, click the Edit icon for the user that you want to edit.

3. Edit the user details and click Save.

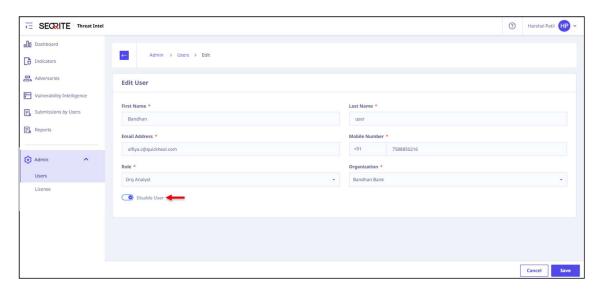

Disable a User

For **On Premise Users**, Org Admin can disable the user from the admin section.

To disable the user, follow these steps:

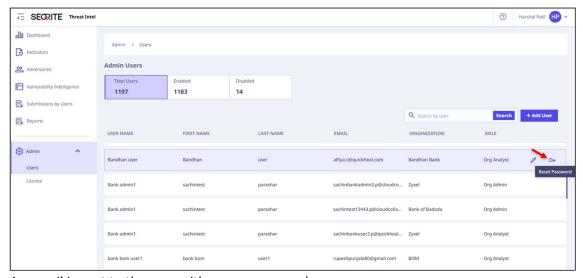

- 1. On the Segrite Threat Intel portal, click **Admin** and select **Users** in the left pane.
- 2. On the **Admin Users** page, click the **Edit** icon for the user that you want to disable.
- 3. Switch the **Disable User** toggle and click **Save**.

Reset User Password

For **On Premise** Users, Org Admin can reset the user from the admin section. Following are the steps:

- 1. On the Segrite Threat Intel portal, click **Admin** and select **Users** in the left pane.
- 2. On the **Admin Users** page, click the **Reset Password** icon for the user for whom you want to reset the password.

An email is sent to the user with a new password

License

This page is visible only to the admin user. On this page, admin can check the status of Seqrite Threat Intel license. The license details page gives details such as, License status, Product key, License Expiry Date (UTC), and No. of users allowed to access the Portal.
