Introducing Seqrite ZTNA

ZTNA from Seqrite helps organizations enforce the zero-trust user access paradigm, where an organization by default does not trust any employee, contractor, or vendor staff with access to its systems and applications whether from within or outside the corporate network. It also replaces the complexity of VPN management.

Starting your zero-trust journey with Seqrite ZTNA:

- Create a zero-trust ecosystem with controlled set of users and applications.
- Deploy an agent-less solution and expand as per security appetite.
- Plug in your security requirements and deploy Seqrite ZTNA within minutes.
- Integrate Seqrite ZTNA with your existing IT infrastructure for identity management.

What's New

Seqrite ZTNA 2.1.3 includes the following new features.

Policy Enhancements

Improved Policy Management Functionality

- **Enhanced Policy Module Visualization**

  Selected policies are now prominently highlighted in the Policy Module when the sidebar is open, ensuring improved visibility and ease of navigation.

- **Export Option for Policy Reports**

  Introduced an export feature for Policy Reports, allowing users to seamlessly export policy data for external analysis or documentation.

- **Added New Filters in Policy Module**

  Implemented an additional filter in the Policy Module, providing users with enhanced flexibility and precision in policy management. Streamline your policy workflows with advanced filtering options.

Application Enhancements

- **Customizable Application Tags**

  Now you can personalize the "Application Details" section by removing or customizing static tags. Tailor the display to your team's specific needs for increased flexibility.

- **Disable Applications Feature**

  Introducing the ability to disable applications! Instead of deleting, you can now temporarily halt an application's functionality. This feature allows for easy reactivation without the risk of losing crucial information, providing a more user-friendly experience.

- **Connection Testing Insights**

  Stay informed during connection tests! In the "Test Connection" section, easily identify the app connector responsible for the check. Streamline your troubleshooting process with this insightful update.

Automated Report Scheduling

As a HawkkProtect admin, now you can schedule reports to be sent effortlessly to registered emails. Enhance efficiency by automating the process, ensuring timely delivery of up-to-date information without manual efforts.

Enhanced End User Portal

- **Enhanced Application Identification**

  Improved user experience with a clear identification system. Easily distinguish Public, Web, and Agent-based applications at first glance for enhanced clarity and intuitive navigation.

- **Application Type Icons**

  Introducing new icons based on application types. Enhanced visual representation by displaying icons specific to each application type for quick identification and categorization.

Technical Support

Seqrite provides extensive technical support for its users. In case you face any technical issue, you can contact our Technical Support center using the options available at the following URL:
