About Seqrite Centralized Security Management

With cyber threats constantly evolving, getting smarter, and more sophisticated, it's time you get holistic visibility of security posture in one place to mitigate risks before it becomes a disaster.

Seqrite Centralized Security Management is a cloud-based platform that will enable coordination between different security layers, integrate cybersecurity silos into a single pane of truth, and ensure your point products communicate with each other to consolidate alerts, identify risks, and convert the data into intelligence.

Seqrite Centralized Security Management will enable your business to prevent real-time malware breaches, make insight-driven decisions, and accelerate vital security functions quickly and effectively with just a few clicks.

Supported Seqrite Products

With Seqrite Centralized Security Management 2.6.1, you can manage the following Seqrite products:

- Seqrite Endpoint Protection (Cloud) with DLP as add-on
- Seqrite XDR
- Seqrite Enterprise Mobility Management/Workspace
- Seqrite Data Privacy
- Seqrite ZTNA

New Features in Seqrite Centralized Security Management 2.6.1

Seqrite Centralized Security Management 2.6.1 offers the following features.

Single Risk and Importance Scores for Managed Endpoints

With the latest update, each managed endpoint will now feature a singular risk score and a singular importance score. The Risk Score is computed from prior endpoint activities and the importance score is computed based on device characteristics as well as content.

This enhancement aims to simplify the assessment process, providing a clear and concise overview of the risk and importance associated with each endpoint.

Known Issues

Here is the known issue in version 2.6.1:

Synchronization Delays Between Seqrite Centralized Security Management (CSM) and Seqrite XDR Importance Scores

The Importance Score in Seqrite XDR may not immediately reflect changes made in CSM, resulting in synchronization delays between the two interfaces. The expected behavior is for the Importance Score to seamlessly update across both CSM and Seqrite XDR. However, real-time synchronization may experience delays until the next alert generation in Seqrite XDR.

Technical Support

Seqrite provides extensive technical support for its users. In case you face any technical issue, you can contact our Technical Support center using the options available at the following URL:
