Overview

Seqrite Universal Update Manager is a standalone tool that is used to download and manage the updates for different Seqrite products with different types of updates. It provides you the flexibility to download the updates on a single machine for Seqrite products.

Note: This Update Manager downloads updates for both 8.2 and 8.3 clients across Windows, Linux, and macOS platforms.

Audience

This guide is useful for the Seqrite Admin, SOC Managers, and Analysts who would be using the system.

System requirements for EPP and EDR Update Manager

EPP Update Manager

Server that supports up to 1 to 2000 endpoints

- Ubuntu 22.04
- Available Disk Space: 8 GBs or above
- Available RAM: 8 GBs or above
- Processer: 4 Core (x86-64), 2.60GHz or above

Server that supports up to 15000 endpoints

- Ubuntu 22.04
- Available Disk Space: 8 GBs or above
- Available RAM: 16 GBs or above
- Processer: 8 Core (x86-64), 2.60GHz or above

Server that supports up to 25000 endpoints

- Ubuntu 22.04
- Available Disk Space: 8 GBs or above
- Available RAM: 32 GBs or above
- Processor: 16 Core(x86-64), 2.60GHz or above

Note: Set server upper limit (ulimit) higher than the derived number of connections; recommended to be 100000.

EDR Update Manager

Supported Platforms	CPU	Memory	Disk
Linux Mint 19.2	2 Core	4 GB	50 GB
Linux Mint 20 64bit			
Ubuntu 22			
• Ubuntu 20.04 64bit			
• openSUSE 42.3, 15.2 64bit			
Red Hat Enterprise Linux 9.1			
BOSS 6 32bit			
• BOSS 8 64bit			
Rocky Linux			

Installation Steps

1. Download Update Manager installer from the following location:

EPP 8.3:

https://dlupdate.quickheal.com/builds/seqrite/83/en/suum_linux_8.3_x64.zip

- 2. Follow these steps to install the Update Manager.
 - 1. Put UM installer suum_linux_8.3_x64.sh and **suumconfig.dat** together.
 - 2. Check suum_linux_8.3_x64.sh permissions for execution.
 - Use the command sudo ./suum_linux_8.3_x64.sh to install Update Manager.

The installation path is: /usr/lib/Seqrite/UpdateManager/.

Note: On some of RHEL, centOS, Scientific Linux, Rocky linux and AlmaLinux systems SElinux is in enforcing mode. For Update manager installation we need to change it to permissive mode using the command.

Post Installation Steps

1. Check if the Update Manager server(umservice) is responding on the default configuredport (18081) with the below mentioned command:

sudo lsof -i:18081 | grep LISTEN

2. If not , Please re-configure a new free port using below mentioned Update Managercommand:

./umcli service-config --action=set --serverPort=<new_port>

Uninstallation Steps

Follow these steps to uninstall the Update Manager.

- 1. Navigate to installation directory.
- 2. Run sudo ./uninstall.

Configuration (suumconfig.json)

Notes:

- This Update Manager downloads updates for both 8.2 and 8.3 clients across Windows, Linux, and macOS platforms.
- These configurations are converted into a dat file and then is consumed by the Update Manager.

Download Modes of Update Manager

Seqrite Universal Update Manager can download updates through either of the below mechanism:

Download Updates directly from CDN (Download mode 0)

Seqrite Universal Update Manager will directly download updates from CDN at a fixed schedule and host those directly through file server URL.

Download Updates from alternative URL (Download mode 1)

Seqrite Universal Update Manager will download updates from any alternative URL where updates are already present. This URL needs to be configured in suumconfig in urllist via SUUM CLI command. SUUM will now host these updates directly through the file server URL.

Download Updates from Local Path (Download mode 2)

Seqrite Universal Update Manager will host updates from the Update folder copied from the standalone update manager on the host machine. The absolute path till /update/1800 needs to be updated in suumconfig file in urllist via SUUM CLI command. UM will now host these updates directly through the file server URL.

UM Service Commands

sudo ./umservice -service [OPTION]

OPTION: [install, uninstall, start, stop, restart]

Command Line Interface (umcli)

This is command line interface which is used to send OnDemand action to UM service to perform

multiple operations as given follow:

Usage:/umcli [OPTIONS]

Note: You need sudo privileges to execute this command. Options are:

	Command	Action	Description	Example
1	update- now	prdid = <product Name></product 	Perform an immediate update on the specified product.	./umcli update-nowprdid=EDR
2	cancel- update	prdid = <product Name></product 	Cancel an ongoing update for the specified product.	./umcli cancel-updateprdid=EDR
3	service- config	action=get	Get current configuration for Update Manager.	./umcli service-configaction=get
4	service- config	action=set proxy= <proxyurl> serverPort=<port> download- rate=<inkbps></inkbps></port></proxyurl>	Set Update Manager service parameters (proxy, serverPort, download rate). Given parameters are not compulsory.	./umcli service-configaction=set - proxy=""http:// <username>:<passwor D>@<ip>:<port>" serverPort=8085 download- rate=1000</port></ip></passwor </username>
5	product- config	action=getall	Retrieve configuration for all products	./umcli product-configaction=getall
6	product- config	action=add prdid= <product- name> file=<input.json></input.json></product- 	Add a new product configuration. Keep input.json into install dir with given format: { "updates":{ "quickup" :{ "downloadMode": 0, "downloadresume": true, "inettimeout_sec": 10000, "urllist": [], "ScheduleTime": "" } }	./umcli product-configaction=add prdid=EDRfile=input.json
7	product- config	action=remove prdid= <product- name=""> updatetype=<update- type></update- </product->	Remove configuration of update type for the given product.	./umcli product-configaction=remove prdid=EDRupdatetype=quickup
8	rollback- update	prdid= <product Name></product 	Rollback a previously applied update for the specified product.	./umcli rollback-updateprdid=EDR
9	get- status	prdid= <product Name></product 	Retrieve the status of the specified product.	./umcli get-statusprdid=EDR

Copyright © 2008–2024 Quick Heal Technologies Ltd.

10	update- schedule	prdid = <product- name=""> updatetype=<update- type> schtime=<schedule in<br="">cron format></schedule></update- </product->	Schedule an update for the specified product.	./umcli update-scheduleprdid=EDR updatetype=prdUpdateschtime="*/4 * * * *"
11	update- schedule	prdid = <product- name=""> updatetype=<update- type>schtime=""</update- </product->	Delete schedule for given update type of product.	./umcli update-scheduleprdid=EDR updatetype=prdUpdateschtime=""
12	get- reports	prdid= <product- name=""> updatetype=<update- type></update- </product->	Retrieve and update reports for the specified product and update type.	./umcli get-reportsprdid=EDR updatetype=prdUpdate
13	save- report	srcfile= <report filename> destfile=<full-path- with-name></full-path- </report 	Save an updated report.	.\umcli save-report srcfile=SHHprdUpdate2024-02-17T11-00- 55.354.rptdestfile= <tmp file="" location=""></tmp>
14	display- report	file= <report- filename></report- 	Display a saved update report.	./umcli. display-report: file=<= <tmp file="" location=""></tmp>

SUUM File Server

This is a local file server to host downloaded updates by Update Manager.

File server will deploy on same machine on UM service start and map to the fileserverdirectory inside installation folder.

Port for this server is provided at the following location:

• suumconfig.dat : http://<IP/host>:18081/file-server

To create directory structure for multiproduct updates on File Server follow below template:

Installation Directory

Note: For EPP above hierarchy is by default available.

Configure Alternate Update Mechanism

Perform the following steps to configure the update mechanism for all the Windows, Mac and Linux endpoints listed in the policy.

- 1. Login to EPP 8.3 console.
- 2. Go to the Policies Page

Policy Name	Poncy type	Description	
Default_EPS	Container Policy	EPS Default Policy	
Policy Settings cjj cjj has modified the	policy on 13 Oct 2023.

- 3. Update >Update mode
- 4. Select Download from specified Update Agents
- 5. Click the Add button. The Configure Update Details screen appears.

Configure Update Details			
Please enter the hostna path for endpoints to d	ame(where the updates are configu ownload the updates.	red) and the custom	
Hostname*	Enter Name		
Custom URL*	Enter URL		
		Close Add	

- 6. Enter the Hostname and the Custom URL.
 - a. Hostname can be any name of the computer where the update folder is placed.
 - b. The URL for Update Manager: <u>http://ipname:18081</u>
- 7. Click Add.
- 8. Click Save Policy on the Policies page.

Once the alternate update mechanism configuration steps are completed, it updates your client endpoints listed in the policy.
