Introducing Seqrite ZTNA

Seqrite ZTNA from Seqrite helps organizations enforce the zero-trust user access paradigm, where an organization by default does not trust any employee, contractor, or vendor staff with access to its systems and applications whether from within or outside the corporate network. It also replaces the complexity of VPN management.

Starting your zero-trust journey with Seqrite ZTNA:

- Create a zero-trust ecosystem with controlled set of users and applications.
- Deploy an agent-less solution and expand as per security appetite.
- Plug in your security requirements and deploy Seqrite ZTNA within minutes.
- Integrate Seqrite ZTNA with your existing IT infrastructure for identity management.

What's New

Seqrite ZTNA 2.3 includes the following new features.

Introduced RBAC for ZTNA

Introduced advanced Role-Based Access Control (RBAC) in ZTNA to improve admin management:

- **Super Admin:** Full access to all settings and pages. Only one allowed per organization; can manage other admins' roles.
- **Admin:** CRUD operations on most pages (Policy, Tags, etc.), view-only access to Site and Certificate pages.
- **Helpdesk:** View-only access to all pages; can export CSV reports.
- **Read-only / Report Viewer:** View-only access to Reports, Audit Trails, Visibility, Dashboards, and Admin & Roles pages.

Admin Portal Enhancements:

- **New Tab:** Added a new tab under Settings > Admins & Roles to manage and view admin details and roles.
- **Edit Functionality:** Modify admin roles directly from the portal.
- **Role Descriptions:** Detailed descriptions of each role's capabilities.

Default "Uncategorized" Folder Implementation in User Portal

- A default "Uncategorized" folder has been implemented to automatically contain all applications that are not assigned to designated folders.
- This folder will be displayed by default and will consistently appear at the top of the folder hierarchy.

Introducing Reports Page in Admin Portal

- **New Reports Page:** Accessible from the left navigation menu, offering a centralized view of user policies and application access.
- **Policy Search:** Admins can select user emails or application names to retrieve and view associated policies.
- **Quick Filters:** Includes filters for user and application tags to streamline report generation.
- **Access Tracking:** Provides visibility into which users have accessed specific applications.
- **Overview Functionality:** Offers a comprehensive, high-level view similar to policy insights, improving administrative oversight.

Device Posture Assessment Enhancements

Expanded device posture assessment to include OS version checks for Windows.

Technical Support

Seqrite provides extensive technical support for its users. In case you face any technical issue, you can contact our Technical Support center using the options available at the following URL:
