Introducing Seqrite ZTNA

Seqrite ZTNA from Seqrite helps organizations enforce the zero-trust user access paradigm, where an organization by default does not trust any employee, contractor, or vendor staff with access to its systems and applications whether from within or outside the corporate network. It also replaces the complexity of VPN management.

Starting your zero-trust journey with Seqrite ZTNA:

- Create a zero-trust ecosystem with controlled set of users and applications.
- Deploy an agent-less solution and expand as per security appetite.
- Plug in your security requirements and deploy Seqrite ZTNA within minutes.
- Integrate Seqrite ZTNA with your existing IT infrastructure for identity management.

What's New

Seqrite ZTNA 2.3.2 includes the following new features.

Personalization Enhancements

Introducing a set of enhanced personalization features designed to improve the customization experience on the User Portal.

Key Updates:

- **Logo Size Slider:** A new slider is now available for customizing the logo size on the Admin User Portal page. Adjust the logo to your preferred dimensions for a more tailored look.
- **UI Preview Dropdown:** Admins can now easily preview both the Login Page and User Portal UI screens from a convenient dropdown menu, making it simpler to review changes.
- **Light & Dark Theme Toggle:** A toggle has been introduced to preview the Admin User Portal page in both light and dark theme modes, offering greater flexibility and visual control.

Scheduling Reports with a 'Daily' Frequency

Introducing a highly requested feature that enhances report scheduling flexibility for ZT admins.

- **Daily Report Scheduling:** In addition to the existing "Weekly" and "Monthly" options, a new "Daily" frequency option is now available for scheduling reports. This allows admins to schedule reports to be generated and delivered at 1: 00 AM each day.

Email Notifications for Configuration Changes

Introducing email notifications for all configuration changes made by admins to enhance tracking and auditing.

Key Features:

- **Email Notifications:** Admins will now receive email alerts whenever specific events occur in the system.
- **Detailed Templates:** Emails will include important details such as Entity Name, Entity Type, Action Type, Timestamp, and specifics of the configuration change.

Covered Events:

- **Policy Configurations:** New policy addition, editing, deletion, and enabling/disabling.
- **App Connector Configurations:** App Connector Installed, Uninstalled, Upgraded, Added to group, Removed from a group.

This update ensures better monitoring of all admin actions with clear, automated notifications.

Notification for Agent Upgrade

When an agent upgrade is triggered, a pop-up message or notification will be displayed to the end user. The message will inform them that the agent is upgrading and their agent-based sessions will be terminated.

App Connector License information- User Interface Improvement

Introducing a license-based limit for app connector installations to ensure proper resource management and compliance with different licensing tiers.

Key Updates:

- **License-Based Limits:**
 - **Trial License:** Allows up to 1 app connector group (with a maximum of 3 app connectors per group).
 - **Standard License:** Allows up to 3 app connector groups (with a maximum of 3 app connectors per group).
 - **Enterprise License:** Allows an unlimited number of app connector groups and app connectors.
- **Installer Button Disabled:** Once the installation limit for app connectors or groups is reached based on the user's license type, the **Download Installer** button in the App Connector → Deployment Tab will be disabled.

This update ensures that users are kept within their license limits while providing a clear and manageable installation process.

Known Issues

Here are the known issues in version 2.3.2:

- Helpdesk users are getting access denial error message while opening the Prominent IDP User's event tab.
- An error message 'Error exporting CSV file' appears after exporting the application and the prominent IDP users. Only the Helpdesk users experience this issue.
- The Helpdesk users are getting access denial error message while performing search using the search application filter on the Policy Insights page.
