What's New?

Seqrite Zero Trust V2.4.2 introduces the following feature enhancements for better user experience.

Device Sync Optimization

Enhancement to synchronize device registration, deregistration workflows across CSM and ZTNA.

ZTNA Login Page Update

Updated the user portal login pages to align with UX guidelines for multiple Identity Providers (IDPs), improving user experience and accessibility.

Improved DVID Handling on Hardware Changes

The agent now detects hardware changes and automatically generates a new DVID, ensuring smooth and efficient device re-registration.

UX-Aligned Portal Enhancements

Refined the login experience on the ZTNA user portal to meet updated UX standards, especially for environments with multiple IDPs.

Multiple-Browser Session Management

Introduced session control to prevent simultaneous logins across multiple browsers. If a user attempts to log in from a different browser while already logged in, the system now displays a "**Login found**" text and pops up a message suggesting users to close the existing sessions.
