Seqrite XDR

Seqrite XDR, Extended detection and Incident Response Solutions, helps you monitor your network for any signs of active cyber threats and respond appropriately. This facilitates proactive threat detection, investigation, and effective remediation to modern day cyber threats. The product supports threat hunting, system and custom alerts, detailed alert analysis and high-level reports that give you a bird's eye view of the organization's security posture. Seqrite XDR brings stability, reliability, security, and an intuitive UI.

Features Released in Seqrite XDR 3.0

Enhanced Threat Detection Capabilities:

Seqrite XDR 3.0 introduces improvements that strengthen threat detection and correlation across endpoints and integrated security sources. Customers benefit from:

- More consistent alerting and incident visibility
- Improved timelines and event correlation
- Integration with our Seqrite Threat Intel for handling of threat intelligence inputs

These enhancements improve the accuracy of detections while reducing noise for security teams.

Revamped Dashboard Experience

Seqrite XDR 3.0 introduces a **new, redesigned dashboard** that provides:

- Clearer visual representation of security posture
- Intuitive widgets for faster analysis
- Improved navigation and usability

The updated dashboard helps security teams quickly understand what matters most and prioritize response actions.

Introducing Remote Script Execution

Security teams can now execute response actions directly from incidents:

- Analysts and administrators can trigger predefined scripts from within an incident
- Actions can be applied directly to affected endpoints
- Response workflows become faster and more efficient

This enables quicker containment and remediation of threats without switching tools or contexts.

Stability & Reliability Improvements

Seqrite XDR 3.0 includes multiple fixes and refinements to improve overall stability, reporting accuracy, and alert quality, including:

- Reduction of excessive low-impact alerts from certain integrations
- Improved accuracy of incident summaries and affected asset reporting
- Enhanced consistency across alerts, incidents, and reports

These improvements collectively reduce investigation time and increase confidence in XDR insights.

Usage Information

- Microsoft has deprecated support for SHA-1 and recommends using only SHA-2 signed certificates for its OS updates. Accordingly, the SHA-1 certificates that Seqrite was using expired on 4th June 2021, so the following operating systems are not supported unless the appropriate patches are applied.
 - Windows Vista
 - Windows Server 2003(below R2)
- Windows 7. To continue using this operating system without any issues, please apply "KB4474419" and "KB4490628" service packs.
- Windows Server 2008 R2. To continue using this operating system without any issues, please apply "KB4474419" and "KB4490628" service packs.
- Mac and Linux OS
 - macOS Mojave - Not supported
 - Linux CentOS - Not supported
- All process events whose process create event is older than 7 days, return a "No data found" error in response and Alerts are not generated for these processes even though corresponding rule may exist.

Technical Support

Seqrite provides extensive technical support for its users. In case you face any technical issue, you can contact our Technical Support center using the options available at the following URL:
