# What's New

---

Seqrite Data Privacy 3.0.0 includes the following new features and enhancements.

## Product Enhancement

- **Address classification - Support for new classifiers**

Seqrite Data Privacy now supports an enhanced address classifier with the capability to detect multiple keywords. After an address is identified using the default address classification, post regex-based classification is subsequently applied. This enhancement improves identification and masking of personally identifiable information (PII) in addresses, strengthening overall data privacy protection.

**Note:** The address classifier is currently not supported in **endpoint agent scanning**.

- **Cookie Enforcement**

Cookie consent preferences selected by users are enforced within the application only after the site owner completes the required integration steps. Refer to the Enforcement Integration Guide for the necessary configuration changes on the site owner side.

Once the integration is complete, the Seqrite Data Privacy platform enforces cookie consent preferences in real time. When a visitor accepts or rejects specific cookie categories through the consent banner, the platform applies those choices by selectively loading permitted cookies and blocking all others.

- **Enhancement in Reassessment/Reassessment of Existing Assessments**

Enabled reassessment of existing assessments using the latest template version, with the ability to prepopulate responses, comments, and attachments from previous assessments.

**Reassessment can be done only on approved Assessments by owner and approver of existing Assessment**

- **SSO Authentication Support**

Seqrite Data Privacy now integrates with Single Sign-On (SSO) via **Keycloak**, allowing users to log in using their organization's domain credentials.

- **IDP tag support for Microsoft Azure (Entra)**

Seqrite Data Privacy admin is now able to configure **Microsoft Entra ID** and fetch user details from **O365** account. This will help in scanning selective users either using names or department which running an O365 scan.

## Architectural Enhancement

- **Agent Enhancement:** Enhanced agent architecture to strengthen classification capability.
- **Database Enhancement:** Improved to reduce storage size and improve product response time.

## Endpoint Support

- **Mac OS:** Seqrite Data Privacy is now compatible with latest macOS 26 Tahoe.

## Technical Support

---

Seqrite provides extensive technical support for its users. In case you face any technical issue, you can contact our Technical Support center using the options available at the following URL:
