What's New

Seqrite Data Privacy 3.0.3 includes the following enhancement.

- **Notification for Risk Profile Modification**

The system now sends notifications when an approver modifies the **Risk Profile** (Risk Mitigation, Risk Description, Likelihood, or Severity) section of an assessment. The Assessment Owner, Respondent, and all lower-level approvers are notified of the changes. Changes are displayed in a clear **Before and After** format, showing only the fields that were modified. If multiple fields are updated at once, all changes are included in a single notification. All modifications are recorded with user details and timestamps for audit and traceability.

- **Consent Management - Update Data Principal API**

Added a new server-to server API that enables customer backend systems to update user consent by mapping the old data principal to a new data principal using the Consent Form Name. The API is secured with a tenant token and records the initiator as **SYSTEM** for API-based updates and **USER** for consent updates submitted by users.

Technical Support

Seqrite provides extensive technical support for its users. In case you face any technical issue, you can contact our Technical Support center using the options available at the following URL:
