About Seqrite Centralized Security Management

With cyber threats constantly evolving, becoming smarter, and more sophisticated, it's time to gain holistic visibility of your security posture in one place to mitigate risks before they become a disaster.

Seqrite Centralized Security Management is a cloud-based platform that enables coordination between different security layers, integrates cybersecurity silos into a single source of truth, and ensures that your point products communicate with each other to consolidate alerts, identify risks, and convert data into actionable intelligence.

Seqrite Centralized Security Management will enable your business to prevent real-time malware breaches, make insight-driven decisions, and accelerate vital security functions quickly and effectively with just a few clicks.

Supported Seqrite Products

With Seqrite Centralized Security Management 2.9.2, you can manage the following Seqrite products for now; we are in persistent development to let you manage other Seqrite products soon:

- Seqrite Endpoint Protection (Cloud) with DLP as an add-on
- Seqrite XDR
- Seqrite EDR Cloud
- Seqrite Enterprise Mobility Management
- Seqrite Data Privacy
- Seqrite ZTNA
- Seqrite Threat Intelligence (STI)
- Seqrite Malware Analysis Platform (SMAP)

What's New

Password Protection for Online Installer

Added support for password-protecting the Online Installer. Administrators can now set a password while generating the installer, ensuring that only authorized users can access and deploy it. Note that this functionality is not applicable for Linux endpoints.

Benefits

- Prevents unauthorized use of the installer.
- Enhances the security of installer distribution.
- Provides controlled access during endpoint deployment.

Technical Support

SEQRITE provides extensive technical support for its users. In case you face any technical issue, you can contact our Technical Support center using the options available at the following URL:
