What's New

Seqrite Data Privacy 3.2.0 includes the following enhancement.

- **Consent Campaign**

New feature for creating tamper-proof consent links and preference center links. This will enable organizations to share consent links to their data principals through their existing communication channels such as WhatsApp, Email, SMS etc. Features include customizable link expiration rules (always active, one-time use, time-based), fallback options for non-existing Data Principals, and secure API endpoints for automated link generation.

- **Outlook Scan Completion Metrics**

Administrators can now track and monitor Microsoft Outlook data discovery scans with dedicated scan completion metrics directly on the console. Administrators can now view metrics for total users scanned, completed scans, failed scans, and pending scans for improved tracking and compliance monitoring.

- **Remote and Roving Endpoint Scanning**

Organizations can now run data discovery and classification scans on roaming and remote endpoints operating outside the corporate network without requiring active VPN or Zero Trust (ZT) connections.

- **Customer Consent Support via Proxy Server**

Added support for corporate proxy environments, enabling secure communication with the Consent Service over HTTPS/TLS without requiring direct internet access.

- **Performance Improvements for OneDrive and Microsoft Teams Scans**

Enhanced data discovery scan speeds for Microsoft OneDrive and MS Teams by introducing parallel processing for users and files, reducing total scan completion time (ETA).

- **Microsoft Cloud Connectors Upgrade**

Upgraded Microsoft SDK to version 6.67.0 across Microsoft 365 connectors (including OneDrive, SharePoint, and Teams) for enhanced security, improved reliability, and better scanning performance.

- **Email Notification for System Component Failures**

Added automated email notifications for Super Admins when any SDP platform system component encounters a failure or health check issue, enabling faster awareness and proactive incident response without needing to log in to the admin console.

- **SDP Admin Activity Logs Enhancement**

Upgraded the Admin Activity Logs module with comprehensive audit logging across all SDP

modules (Discovery & Classification, Consent Management, DSR, Assessments, Integrations, and more).

Added support for toggle views between User and System actions, detailed Previous vs. Current State change comparisons, date range filtering, advanced search, and report exports for audit and compliance readiness.

- **Seqrite logo Integration into Cookie Consent Banner**

Integrated Seqrite logo to the Cookie Consent banner for consistent visual branding.

Technical Support

Seqrite provides extensive technical support for its users. In case you face any technical issue, you can contact our Technical Support center using the options available at the following URL:
